A chart of colours, and a drawing that names places in it

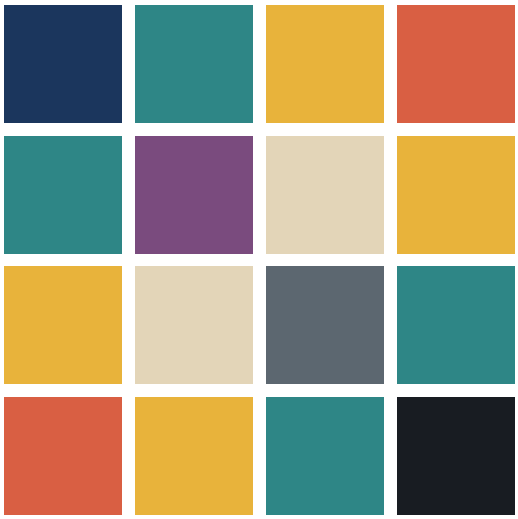

The two drawings below are the same sixteen numbers. Neither of them says a colour: each says which row of the table to look in, and the document carries the table.

Each table is 24 bytes: 3 numbers a row, one for each component of its space.

The house colours

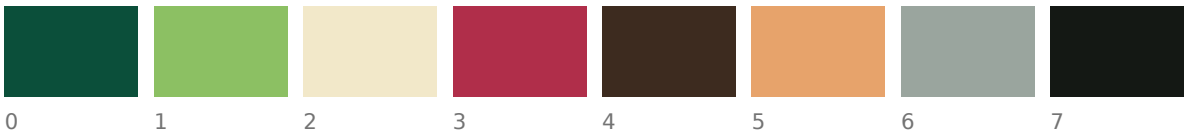

Eight rows of red, green and blue, carried in the file and named 0 to 7.

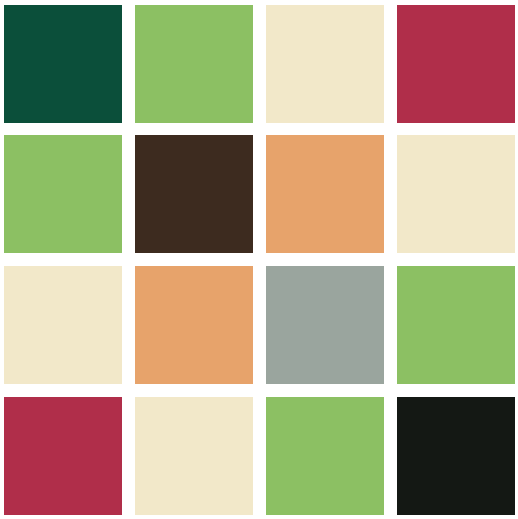

The same drawing, one table later

The same eight places, filled in for another season. The drawing was not touched.

Repainting the house is one table, not one drawing: nothing above was drawn twice, and nothing in either drawing had to be found and changed.
