

One cell, tiled across whatever it fills

Each panel holds one cell's operators, however wide the panel. The plane is tiled in the page's own space, so every panel below is a window onto the same grid.

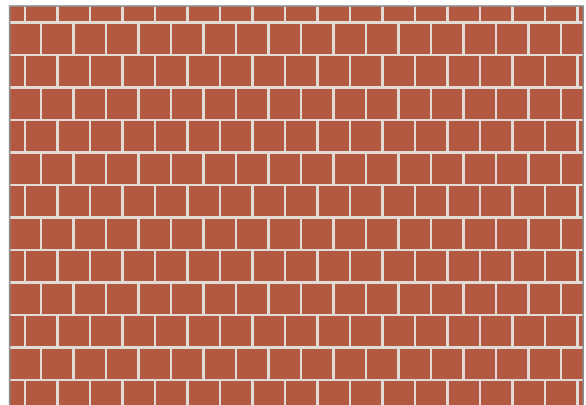

Bars, stepping their own width

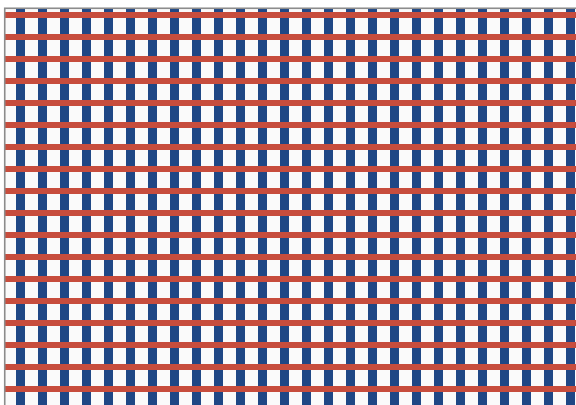

One dot, stepping wider than itself

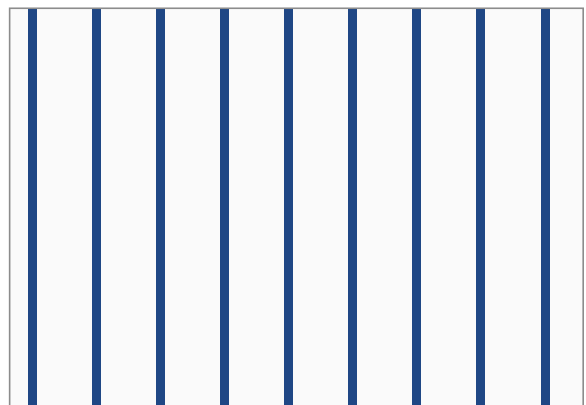

The same bars, slanted by the pattern's matrix

Bricks: what leaves the cell's box is cut off

Two patterns, one over the other

The same bars again, at three times the step

hqf-pdf

The brick pattern again, this time as the colour a run of text is filled with.
