One cell, tiled across whatever it fills

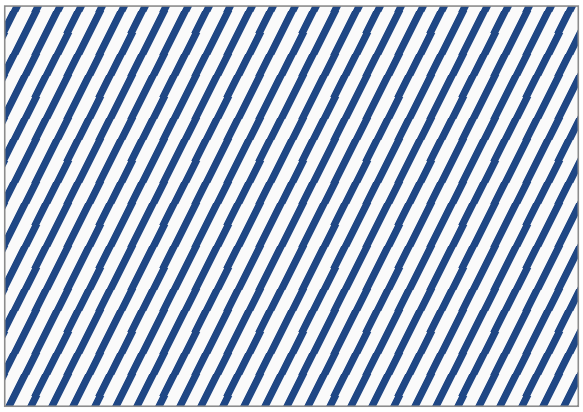

Each panel holds one cell's operators, however wide the panel. The plane is tiled in the page's own space, so every panel below is a window onto the same grid.

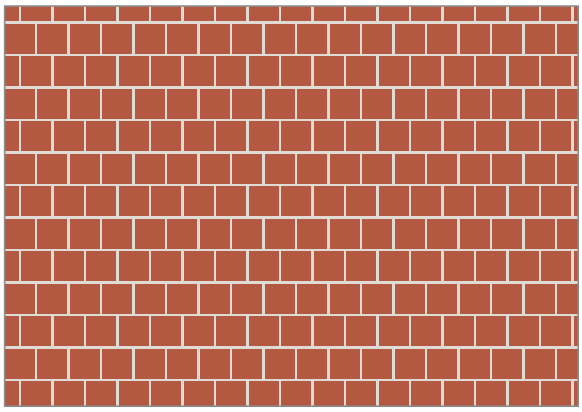

Bars, stepping their own width

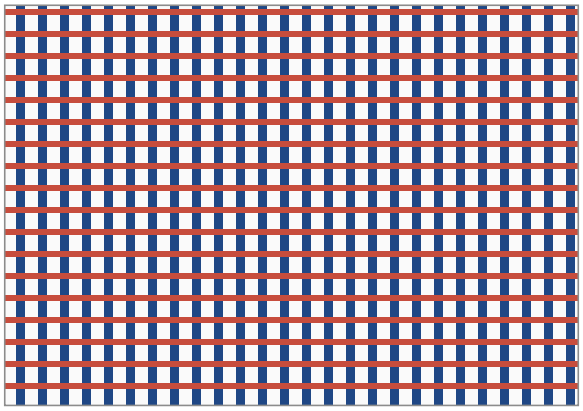

One dot, stepping wider, never stretched

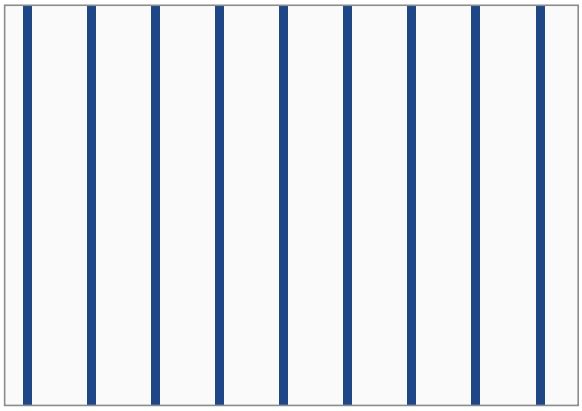

The same bars, slanted by the pattern's matrix

Bricks: what leaves the cell's box is cut off

Two patterns, the rules tiled fast

The same bars again, at three times the step

A seal from a page of another PDF, tiled as the colour the word above is filled with.
